

How I designed, built and shipped

A journey from manual workflow to a real app.

JobHunting in 2026

AI workflows help with
repeating tasks and preparation

Storytelling

A big part of interviews:
Packaging your experience into clear stories

How to S.T.A.R.

S	Situation	<i>Set the scene</i>
T	Task	<i>Your job</i>
A	Actions	<i>What YOU did</i>
R	Results	<i>What changed</i>

First iteration: 3 tools & manual

Talk into Recorder

Upload to AssemblyAI
transcription

“Claude, make this a
STAR story”

My Goals

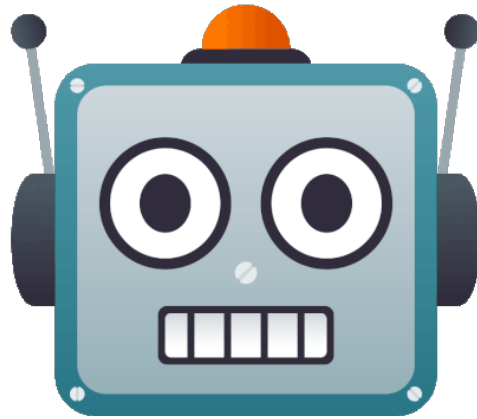

- ✓ Have a clear product goal to get hands-on experience with agentic workflows & tools.
- ✓ Something useful.
(At least for myself.)
- ✓ Automate everything.
- ✓ Build something that makes good use of AI in the product.

BUILD: The app idea

Write/Talk freely

AI thinks about it

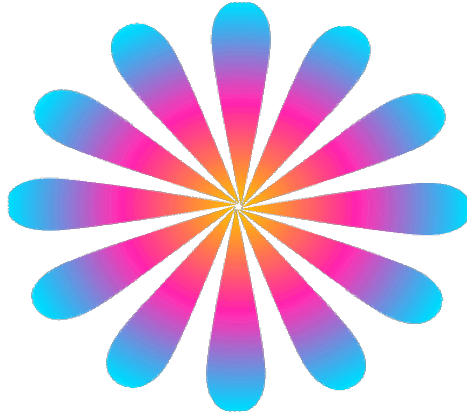

STAR story out

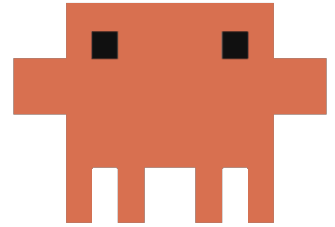

BUILD: The journey

Plan mode

PRODUCT: How to use STARlog

Job first

Story first

PRODUCT: User flow

Collect stories

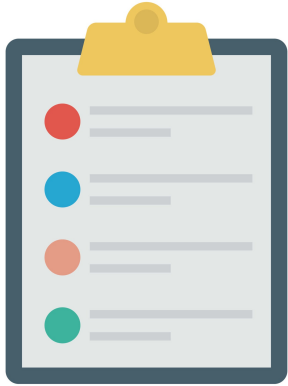

Match against job

Rehearse

PRODUCT: Use cases for AI

Job demands

STAR format

Inspiration

PRODUCT: AI choices

- generous free tier
- fast (enough)
- multimodal: text & voice recording & mp3

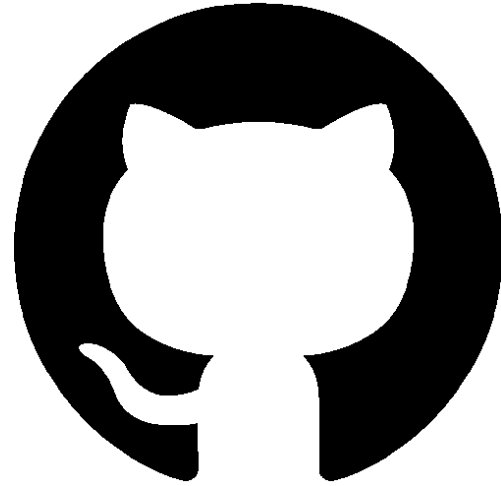

- free to use
- fast (enough)
- works locally in Chrome
- NO audio input, text only

Try for yourself
